Portfolio : www.sachintha-waduge.vercel.app | Github: <https://github.com/sachin4real>

PROFESSIONAL SUMMARY

Software Engineering undergraduate at SLIIT with six months of practical industry internship experience in full-stack web development, API integration, database handling, testing, and debugging. Gained hands-on exposure to real-world software engineering practices within a collaborative and agile environment. Strong foundation in software design, system architecture, and performance optimization, with a people-focused approach to teamwork, communication, and problem-solving. Passionate about creating scalable, user-centric software solutions while continuously improving technical skills and contributing positively to organizational goals.

PROFESSIONAL EXPERIENCE

Uvexzon (PVT) LTD – April 2025 – October 2025 (Intern)

Key Projects Worked On

EXOTIC AQUA – E-Commerce Platform

An online marketplace for aquarium-related products, designed for buyers, sellers, and administrators to manage product browsing, purchases, orders, and customer support.

UEA – United Entrepreneurs' Association

A modern informational web application developed to represent the United Entrepreneurs' Association, promote its initiatives, and provide information about services, resources, and entrepreneurial support in Sri Lanka.

- Gained hands-on experience in designing, developing, and integrating RESTful APIs within a distributed architecture.
 - Worked closely with senior engineers and DevOps teams to investigate production-level issues, analyze real-time logs, and contribute to debugging and issue resolution in live environments.
 - Participated in code reviews, agile sprint planning, and deployment cycles, gaining practical understanding of software development workflows in a real-world, high-performance environment.
 - Acquired foundational knowledge of Docker and Kubernetes
-

EDUCATION

Sri Lanka Institute of Information Technology – SLIIT

BSc (Hons) in Information Technology

Sep 2022 – Present

Expected completion: 2026

TECHNICAL SKILLS

General : Java , JavaScript

Backend : Node js , SpringBoot

FrontEnd : React js , React native , HTML , CSS , TailwindCSS

DataBase: MySQL , MongoDB , Postgresql

DevOps & Cloud Engineering : Docker , Kubernetes, AWS (EC2, IAM,S3,RDS) , Github Actions

Version Control & Collaboration : Git , Github

Other : Postman , Figma

PROJECTS

AI-Based Hydroponic Lettuce Health Monitoring and Prediction System

Final Year Research Project – 2025–2026

Description: Collaborated in developing an AI-powered hydroponic lettuce monitoring system to support plant health analysis, disease and nutrient deficiency detection, water quality and algae risk prediction, weight estimation, shelf-life prediction, and early spoilage alerts. Contributed to the image-based plant health classification component using machine learning and deep learning models to identify healthy leaves, diseases, and nutrient deficiencies. The system also integrates IoT sensor data to analyze water quality conditions and predict algae risk, helping farmers make early decisions to improve crop quality and reduce post-harvest losses.

Technologies Used: Python, TensorFlow/Keras, YOLOv8, OpenCV, FastAPI, React Native, PostgreSQL/MySQL, IoT Sensors, Machine Learning, Deep Learning, Image Processing, Random forest

Foodie – Multi-Restaurant Food Ordering App

Academic Group Project – 2025

Description: Developed a full-stack food delivery application that allows users to order from multiple restaurants, manage a shared cart, and track orders in real-time (e.g., cooking, out for delivery, delivered). Implemented automatic driver assignment based on traffic and location, and integrated Stripe for secure online payments. The system was built using Spring Boot and React.js in a microservices architecture, containerized with Docker, and deployed on Kubernetes for scalability and efficient orchestration.

Technologies Used: React.js (Frontend), Springboot (Backend), MongoDB (Database)

FindIt – Lost and Found Item Management Application

Academic Group Project – 2026

Description: Collaborated in developing a lost and found item management platform that helps users report lost items, submit found items, and match possible item records through a structured claim process. The system includes core modules for item reporting, matching, claim handling, user management, and notifications. Contributed to backend service design, API development, database integration, and Docker-based development setup to support a scalable and maintainable application architecture.

Technologies Used: React.js, Node.js, Express.js, PostgreSQL, Docker, REST APIs, Git, GitHub

PERSONAL SKILLS

- Strong team collaboration and leadership abilities
- Excellent communication skills for technical and non-technical audiences
- Effective time management and multitasking
- Positive attitude and eagerness to learn
